HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pp. 4-6 of Appeal Brief, filed 4 April 2008, with respect to claims 1, 4-5 and 9-13 have been fully considered and are persuasive. The rejection under 35 USC 103 based on Arendt (US 2003/0036483) in view of Rosswag (US 4,372,831) in further view of Faust (US 2,366,713) of claims 1, 4-5 and 9-13 has been withdrawn.

2. Applicant's arguments, see pp. 6-8 of Appeal Brief, filed 4 April 2008, with respect to claims 1, 4-5 and 9-13 have been fully considered and are persuasive. The rejection under 35 USC 103 based on Glowacki (Texture development in long lengths of NiFe tapes for superconducting coated conductor) in view of Rosswag in further of Faust of claims 1, 4-5 and 9-13 has been withdrawn.

Allowable Subject Matter

3. Claims 1, 4-5 and 9-13 are allowed.

4. The following is an examiner's statement of reasons for allowance: Prior art does not teach, suggest or discloses a process of electropolishing comprising a step of passing an uncoated polycrystalline nickel alloy having an initial roughness of at least 10 nm in an electropolishing bath and is electropolished to a roughness of less than 1 nm. Arendt et al. or Glowacki teaches many of the features of the claimed invention including passing an uncoated polycrystalline nickel alloy having an initial roughness of at least 10 nm in an electropolishing bath, but do not teach a step of electropolishing to a roughness of 1 nm or less (Arendt et al. does teach depositing an inert oxide layer,

Art Unit: 1795

and then chemically mechanically polishing to 1 nm, paragraph [0016]). Faust indicates that higher current values (such as values that overlap the claimed range, 0.11 A to 0.54 A per sq. cm.) can be used in order to obtain the best results in a reasonable time, i.e., increase current to decrease time of electropolishing. Faust also makes the general statement that rougher surfaces take longer times to polish than relatively smooth surfaces. (Faust, p. 2, col. 2, lines 20-36). Faust also mentions that desired results depend on nickel grain size and other characteristics. Faust teaches that higher current values and longer electropolishing times effect smoother surfaces (i.e., the desired result). Faust defines his desired result as “a highly lustrous, mirror-like surface.” There is no teaching that “a highly lustrous, mirror-like surface” would be equivalent to a surface roughness of 1nm or less. So, in summary, while Faust teaches increasing current and electropolishing time in order to get a smoother surface, Faust does not provide motivation to increase current applied or time applied to effect a surface roughness of 1nm or less. Examiner has also found a teaching that shows that one of ordinary skill in the art would expect that electropolishing of metal surfaces results in only approximately a 50% reduction in surface roughness (Harrison Electropolishing,

<http://www.harrisonep.com/services/electropolishing/default.html?kc=lm6TM&wcw=google&ex=uxyup6-eeep549-greaj1>), but not the amount of surface roughness reduced as in the instantly claimed invention.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
